Profile

Full-stack Software Engineer with 3 years of experience building SaaS applications and web platforms using React.js, Next.js, Node.js, and PostgreSQL. Passionate about writing clean, maintainable code and improving system scalability and user experience. Experienced in collaborating across teams, conducting code reviews, and delivering reliable, high-performance features for production environments.

Key Strengths

- Proficient in designing scalable APIs and relational database schemas
- Skilled in end-to-end feature delivery from requirements to deployment
- Focused on performance optimization, clean architecture, and maintainability
- Strong communicator and effective team collaborator

Professional Experience

Software Engineer, Qbatch

- Developed and maintained full-stack features for SaaS and marketplace applications.
- Implemented an end-to-end notification system, increasing user engagement by approximately 20%.
- Delivered bug fixes and performance enhancements, reducing production incidents by around 30%.
- Conducted code reviews and improved code quality standards across multiple repositories.
- Collaborated with cross-functional teams to deliver client-focused solutions for 3+ projects.

Associate Software Engineer, CCript

- Designed and developed RESTful backend services for multiple client projects.
- Built reusable validation middleware to standardize API input formats and ensure consistent data flow, improving backend reliability and reducing data errors.
- Documented technical workflows, shortening onboarding time for new developers.
- Collaborated directly with PMs and clients to translate requirements into technical deliverables.

Software Engineer Trainee, MTechSoft

- Supported maintenance and contributed to feature updates in legacy systems.
- Assisted in debugging and troubleshooting, improving issue resolution time.
- Strengthened fundamentals in React.js, Node.js, and PostgreSQL through real-world projects.

Education

FAST NUCES, Lahore – BS in Computer Science

- CGPA: 3.25/4.0 — Recipient of two Dean's List Honors
- Final Year Project – *Ghoomo Phiro Pakistan*: Developed an online platform for customized tour packages using the MERN stack.
- Leadership: Served as Senior Manager in VOICE Debating Society, managing event logistics and teams.

Divisional Model College – GCE A-levels

- Achieved A*, A, and B grades in core subjects.

Divisional Model College – GCE O-levels

- Achieved 2 A* and 6 A grades across core and elective subjects.

Projects

Enterprise platform streamlining contractor onboarding and lender assignments

- Developed and enhanced core modules for contractor–CSM–lender interaction workflows.
- Implemented admin functionality for inviting CSMs and managing lender allocations.
- Built features allowing CSMs to review, approve, and assign contractors to lenders.
- Contributed to lender program recommendation logic, improving program matching accuracy for clients.
- Enhanced API performance and data consistency across user and lender assignment flows.

Full-stack SaaS platform enabling users to buy and sell vehicles through verified listings

- Designed and developed the backend notification system to alert users of listing updates and offers.
- Improved system responsiveness and delivery reliability of notifications using Node.js and PostgreSQL.
- Enhanced user experience by optimizing listing-related queries and caching mechanisms.
- Contributed to frontend improvements using Next.js and Tailwind CSS for a seamless browsing experience.

Web-based examination platform supporting multi-language tests and reliable progress tracking

- Built a robust examination platform supporting both English and Arabic exams.
- Implemented autosave and resume functionality with Express.js and PostgreSQL using temporal table concepts for historical data tracking.
- Designed data models and APIs for student submissions, time-based autosave, and result aggregation.
- Enhanced fault tolerance in exam sessions, significantly minimizing data loss during disconnections.

Educational SaaS platform for managing classrooms, learning materials, and assessments

- Developed backend APIs for managing courses, resources, and student assessments using Node.js and PostgreSQL.
- Handled structured relationships between teachers, students, and uploaded academic resources.
- Designed efficient database schemas for managing thousands of student and course records.
- Enhanced platform scalability and performance by optimizing resource and assessment retrieval operations.

SaaS platform for managing machinery listings and vendor–client interactions

- Built and maintained modules for vendor listings, availability tracking, and client inquiries.
- Implemented backend services for managing equipment data, vendor communication, and user sessions.
- Developed responsive frontend components using React.js and Tailwind CSS, ensuring smooth navigation.

Technical Skills

React.js, Next.js, Node.js, Express.js, Nest.js, Tailwind CSS, PostgreSQL, Git, REST APIs, Sequelize, Joi Validation
